### DETAILED ACTION

Claims 1-9 are currently pending.

#### ***Election of Species (burdensome search)***

1. Claim 1 is an assay which comprises the use of a generic of viruses encoding a plurality of disclosed patentably distinct species of fusion polypeptides comprising a "viral coat protein" and a "heterologous peptide" the search of different species thereof being unduly burdensome due to different and separately burdensome manual/computer structure/bibliographic searches in patent/literature areas. In this regard, the Examples disclose fusion polypeptides which are drawn to structurally distinct compounds.

**2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species of fusion polypeptide (e.g. from one of the examples defining the "heterologous polypeptide" and the "coat protein")), even though this requirement is traversed and indicate claims readable thereon.**

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one

Art Unit: 1639

or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
